

Birate Kabanza Arthur

Data Analyst

arthurbirate98@gmail.com | +32470872947 | Geel 2440, Belgium | linkedin | Github

PROFILE

Data Analyst focused on transforming data into clear, actionable insights that support business decisions. Experienced in analyzing performance, identifying inefficiencies, and building dashboards across operations, revenue, and customer behavior. Strong skills in SQL, Python, Tableau, and Power BI, with hands-on experience in KPI design, data modeling, and real-time monitoring.

EXPERIENCE

- Van Genechten Packaging**, Data Analyst Intern02/2025 – 06/2025 | Turnhout, Belgium
- Built real-time monitoring dashboards across more than 25 systems, improving visibility and reducing troubleshooting time by approximately 30 percent
 - Automated alerts for system issues, improving response time and operational reliability
 - Optimized data pipelines and queries, reducing dashboard load time by approximately 40 percent
 - Developed anomaly detection models to identify system issues early
 - Used data analysis to improve performance monitoring and support engineering decision-making

EDUCATION

- Bachelor Applied Computer Science**, Thomas More University of Applied Science09/2021 – 09/2025 | Geel, Belgium
- Relevant courses: Data Visualization, Machine Learning, Big data, Artificial intelligence, Web development

TECHNICAL PROFICIENCIES

Programming & Querying Python, SQL	Business Intelligence & Visualization Tableau, Power BI, Qlik Sense, Grafana, Kibana	Data & Analytics Tools Excel, Elasticsearch, Logstash	Data Analysis Skills Data Cleaning, Data Modeling, Exploratory Data Analysis, KPI Development, Dashboard Design, Time-Series Analysis
Web & Backend Django, REST APIs, Tailwind CSS, HTML, CSS	DevOps & Tools Git, GitHub, Docker		

LANGUAGES

French Professional proficiency	English Professional proficiency

PROJECTS

- EV Charging Network Analytics — VoltCharge Networks (Case Study) | Tableau**  , Tableau
 - Analyzed global EV charging data to identify demand patterns, pricing inefficiencies, and revenue concentration
 - Found approximately 17 times variation in demand and 49 percent of revenue concentrated in three cities, highlighting imbalance and dependency risk
 - Identified peak usage patterns (7 times higher demand during peak hours) and inconsistencies between usage and revenue
 - Highlighted customer segmentation with 70 percent low-value users, indicating strong upsell potential
 - Provided insights to support infrastructure planning, pricing optimization, and revenue growth
- Healthcare Financial & Operational Analytics — MediCore (Case Study) | Tableau**  , Tableau
 - Analyzed financial and operational healthcare data to identify inefficiencies in revenue, payments, and appointment management
 - Identified approximately \$140M in outstanding revenue and \$135.8M lost from missed appointments, highlighting major financial and operational gaps
 - Found that insurance represents approximately 56 percent of revenue, creating dependency on slower payment processes
 - Discovered that only 75 percent of appointments are completed, reducing efficiency and revenue
 - Analyzed doctor workload and found balanced distribution across specializations with consistent completion rates (70–80 percent)
 - Identified that improving completion rates, even slightly, can significantly increase total completed appointments and revenue
 - Delivered insights to improve cash flow, scheduling efficiency, and resource allocation
- Coffee Shop Sales & Customer Analysis | Tableau**  , Tableau
 - Analyzed transactional sales data to understand customer behavior, product performance, and revenue trends
 - Identified peak demand periods by hour and day, supporting better staffing and operational planning
 - Discovered that a small number of products generate the majority of revenue, highlighting sales concentration
 - Analyzed seasonal patterns and fluctuations in demand, supporting forecasting and inventory management
 - Used time-based analysis and customer behavior insights to improve decision-making around staffing, pricing, and product strategy
- Olympics Performance Analytics Dashboard**  , Qlik Sense
 - Developed dashboards analyzing Olympic athlete performance, medal distribution, and country rankings.
 - Built interactive visualizations comparing country performance across Olympic years and sports categories.
 - Implemented filters for country, sport, and gender to support multi-level analysis.
 - Highlighted performance trends and key medal-winning nations using advanced visual analytics.
 - Tools: Qlik Sense, Data Visualization, KPI Design
